

# PAL Button–In Home System

*For Landline connections*

## **Description**

The PAL Button In Home Medical Alert system is a two part system consisting of the tiny PAL Button (also known as the panic transmitter) and the dynamic base unit. It has been designed and engineered *specifically for medical emergency monitoring* (competitors alert systems are often modified burglar alarm units)

***The PAL Button*** is the smallest in the industry and is 100% waterproof . It can be worn as a neck pendant or wrist watch.

***The base unit***, with its built-in computer performs many duties. It automatically performs diagnostics, monitors its own rechargeable battery, the long life battery in the PAL Button, and the status of your telephone line. The base unit is also equipped with built- in microphone / speaker that is powerful enough to allow for clear voice communication between your home and the Care Monitoring Center.

These amazing capabilities and more are what make the PAL Button In Home Medical Alert System superior to our competitors.
